

Country Note on South Africa

(Continued from previous issue)

Standards

The South African Bureau of Standards (SABS) is the South African government agency responsible for standards. SABS enjoys the distinction of being the only administrative structure of its kind in Sub-Saharan Africa. In recent years SABS has undergone a major overhaul. The Standards Act of 1993 called for SABS to assume a more international outlook. Departments within SABS include Small, Medium, and Micro Enterprises (SMME) Development, as well as South African Standards, Quality Assurance, Accreditation and Metrology (SQAM). SABS is accredited nationally by the South African Accreditation System (SANAS), and is recognized internationally by Netherlands-based Raad voor Accreditatie (RvA). SABS belongs to both the International Organization of Standardization (ISO) and the International Electrotechnical Commission (IEC). Accordingly, it issues pharmaceutical and industrial standards that conform to those of the ISO.

All SABS standards are in the process of being renamed as South African National Standards (SANS). This change is being carried out to make the numbering system simpler and more understandable. The conversion will be a lengthy one and will not be completed until the year 2007.

The standards issued by the SABS are in accordance with the Environmental Conservation Act and are enforced on all imports and exports. All foreign companies establishing themselves in South Africa need to have their Environmental Management System (EMS) certified. This certification needs to be updated every year in order to ensure that the company is observing South African standards.

The Directorate of Plant Health and Quality within the National Department of Agriculture (<http://www.nda.agric.za>) is responsible for setting standards for certain agricultural and agricultural-related products. These standards cover aspects such as composition, quality, packaging, marketing, and labeling as well as physical, physiological, chemical, and microbiological analyses.

List of South African Standard Organizations

a. South African Bureau of Standards (SABS)

Representatives from SABS have stated that they have no plans to recognize any U.S. standards in the near future. Any product with a medical claim must be registered by the MCC before it can be distributed in South Africa. Industrial goods are a different matter. A sizable number of companies

surveyed reported that their products needed to undergo modifications in order to satisfy SABS standards. As indicated earlier, these alterations, though time-consuming, do not result in unacceptable cost implications. U.S. products delivered onto the market are able to compete with competitors. With regard to consumer protection, recent reports indicate that SABS will take a tougher line on companies that violate mandatory standards. Other proposed reforms would impose Organization for Economic Cooperation and Development (OECD) standards in South Africa. While this may not always be strictly enforced, the possibility of more stringent consumer protection regulation is something that companies need to take into account.

Website : <http://www.sabs.co.za>

b. Council for Scientific and Industrial Research (CSIR) - Research organization aiming to promote economic growth in southern Africa.

Website : <http://www.csir.co.za>

c. Engineering Council of South Africa (ECSA) - Statutory body focused on promoting high standards of engineering work.

Website : <http://www.ecsa.co.za>

d. National Department of Agriculture (NDA) - Government agency responsible for setting standards for certain agricultural and agricultural-related products.

Website : <http://www.nda.agric.za>

e. Department of Health - Government organization that aims at increasing the quality of medical care in South Africa.

Website : <http://www.doh.gov.za>

Product Certification

Following are the important points regarding product certification :

a. Electrical products need to receive Electromagnetic Interference (EMI) certification.

b. A mutual recognition agreement (MRA) exists between the Engineering Council of South Africa (ECSA) and the Accreditation Board for Engineering and the Accreditation Board for Engineering and Technology, Inc. (ABET) in the United States.

c. All medicines must be certified by the MCC.

d. Electromedical products, such as x-rays, need certification from the Radiation Control Council, a directorate of the Department of Health.

Investment Climate in South Africa

Openness to Foreign Investment

The government of South Africa (SAG) welcomes foreign investment as a key driver for the country's economic development and integration into the global economy. Its macroeconomic management is sound. Investment policies that promote openness and raise productivity and growth are key objectives of the SAG. The SAG has liberalized trade and developed its competitiveness by lowering tariffs, abolishing most import controls, and reforming the regulatory environment.

South Africa's record of political and macroeconomic stability over the past decade has helped to create a promising medium to long-term economic climate for local and international firms in South Africa. South Africa, through its Trade and Investment South Africa (TISA) promotion agency, provides investment facilitation services for inbound investors. While investment opportunities are abundant in many sectors of the economy, the agency concentrates on sectors which research has indicated a high SA comparative advantage. The agency offers the following services to international investors :

- Information on sectors and industries;
- Consultation on the regulatory environment;
- Facilitation on investment missions;
- Links to joint venture partners;
- Information on incentive packages;
- Assistance with work permits;
- Logistical support for relocation.

The Department of Trade and Industry (DTI) published a comprehensive guide for investors about the dynamics and principles involved in the South African business environment. For "Investor's Handbook" please visit the website : www.dti.gov.za.

To encourage investors to establish or relocate industry and business to areas throughout South Africa, the country's various regions (provinces) have development bodies that offer incentives. These incentives, which vary from area to area, include reduced interest rates, reduced rentals for land and buildings, cash grants for relocation of plant and employees, reduced rates for basic facilities, rail age and other transport rebates and assistance in the provision of housing.

South Africa's policy and regulatory frameworks can, however, serve as disincentives to new investment or impediments to the profitability of firms already operating in SA. Several foreign companies have in the past complained that South Africa's immigration legislation and the application of the law made it difficult to get work permits for their foreign employees. In particular they indicated that unnecessary delays, rejections of applications and limits (quotas) on foreign workers in a given field call into question potential investors' ability to staff their operations with the necessary skills at a given time. It was argued that the immigration legislation was a remnant from the apartheid-era and did not take into account recent developments and the opening up of the South African market.

In contrast to domestic investors, foreign investors face local borrowing restrictions imposed by exchange control authorities. Such restrictions apply to 'affected persons' - companies or other bodies in which (1) 75% or more of the capital assets or earnings may be used for payment to, or for the benefit of, a non-resident, or (2) 75% or more of the voting securities, voting power, power of control, capital, assets or earnings are vested in, or controlled by, any non-resident. No person in SA may provide credit to a non-resident or "affected person" without exchange control exemption. Non-residents and "affected persons," however, may borrow up to 100% of the South African Rand value of funds introduced from abroad and invested locally. Additionally, the ability to borrow locally increases if both residents and non-residents own the local enterprise.

The SAG has an official policy on the restructuring of state assets, which include privatization as an accepted option. There are four big parastatals, all at different levels of privatization : Eskom (power generation and distribution), Denel (defense), Transnet (transportation) and Telkom (telecommunications). Eskom supplies nearly 94% of South Africa's electricity, makes substantial profits and has a turnover of nearly R30 billion per year. Transnet dominates the transport sector and contributes more than 3% of South Africa's GDP. It comprises 13 companies involved in multi-modal transport and includes railways, an airline, ports and a pipeline. Transnet has reported that they will keep only four of its businesses.

The medium-term privatization of smaller parastatals such as Sentech (radio transmission), Safcol (forestry), the SA Post Office, or in the case of Denel (Defense R&D and manufacturing), a hoped-for partial buy-in by foreign suitors, may also afford lucrative opportunities for foreign participation.

Chambers and Industry Associations in South Africa

South African Chamber of Business (SACOB)
James Lennox - Chief Executive Officer
P.O. Box 213, Saxonwold, 2132
Tel. : (27 11) 446-3800
Fax : (27 11) 446-3847/49
