ENGKONNECT EXPO 2025 - A Mega Engineering Show on Multiple Engineering Products

Why Sri Lanka?

Sri Lanka presents a promising market for Indian engineering exporters. The country has seen robust growth in key manufacturing sectors such as construction materials, packaging, automotive components, and light engineering goods. These sectors are expanding due to increased infrastructure development, urbanization, and industrial recovery. The presence and growth of these industries naturally drive demand for a wide range of engineering products-machinery, tools, electrical equipment, and fabricated metal products. This creates a significant opportunity for Indian engineering exporters to deepen their footprint in the Sri Lankan market by catering to the evolving needs of these sectors.

In FY 2024–25, India's engineering exports showed a mixed performance across categories. While overall growth was driven by sectors like aircraft and spacecraft parts (430% growth), motor vehicles (147%), and IC engines (107%), traditional heavyweights like shipbuilding and iron and steel saw significant declines of -42% and -12% respectively. The ship, boat, and floating structures category, despite its decline, still held the largest share (23%) of total engineering exports. The rise in high-tech and automotive components suggests a shift toward value-added and precision engineering exports, while the drop in core industrial materials may reflect global demand fluctuations or pricing pressures. This diversification in export performance highlights both emerging strengths and areas needing policy support.
